

Features

Fully Redundant • Latency Optimization • Secure • Fire Suppression • 24/7 Support

Rigstar's Data Centre is located in downtown Calgary, Alberta and is recognized as an ideal location throughout the world. This can be attributed to the absence of natural disasters, political stability, cooler climate and the close proximity to multiple peering points.

Our Data Centre is fully redundant and offers multiple connections to major Internet carriers using BGP routing.

BGP routing is the industry standard protocol that offers network stability and can quickly adapt to send packets through another connection if an Internet path goes down.
