

Hardware

Switches • Access Points • Servers • Routers • Modems • Printers • Cabling • Phones

LANs are an assortment of computers and devices that share a common line or wireless link to a server.

Rigstar's Network Team is able to cost effectively design, install and support a complete LAN system based on a customers specific recommendations. Our Technicians review the installation procedure with the on-site Supervisor prior to any commencement of work.

Once the project is completed our Quality Department prepares a Close Out Report that documents all of the cable runs, hardware placement and testing of the network.
