

### Connectivity

**Fiber Optics • Fixed Wireless • Ethernet • Cellular • Satellite**

WANs are used to transmit data over long distances and between different LANs. Rigstar has the capabilities to leverage multiple backhauled to service any location.

Our team of specialists will select an optimal solution for any environment based on connectivity, hardware and cost.

Rigstar is able to implement a Virtual Private Network (VPN) to organizations across any WAN with guaranteed reliability. Rigstar's Network Operations Centre (NOC) will provide additional support to ensure the network is achieving 99.999% availability.
